Operating system for hybrid language learning

Roleplay-based English learning app

Recurring, realistic scenarios like interviews, negotiations, and social conversations with AI characters that remember past interactions.

Real-time tracking

conversation statistics, error tracking, completion of mini-tasks, and a rewards system

Prompt-to-scenario engine

Multi-step conversation scenarios with AI agents with structured practice paths that adapt to students' progress

1-on-1 tutoring platform

A unified tracking system where data from AI voice sessions informs human-led lessons, allowing students to switch effortlessly between autonomous practice and professional tutoring.

Prompt-to-scenario engine

Chat about your progress and set the goals

Multi-step scenarios

Time is **now**

Quality of a realtime voice agents

The new era for a modern language learning apps

High development velocity with low costs

What problems of **students** do we solve?

Loss of motivation

Students often lose interest due to a lack of visible progress, repetitive activities, uninteresting topics for discussion with the teacher, and mundane homework assignments.

Does not use new knowledge

They learn new words and grammar but apply them weakly or not at all in practice.

High cost

Quality certified language teachers (native speakers) are expensive, and not everyone can afford quality and engaging education.

Lack of Integration

Students rely on multiple applications, but their activities, progress, and needs remain unsynchronized.

What problems of **teachers** do we solve?

Time

Preparation for the lesson and immersion in the context of previous lessons takes up to 40% of the actual lesson time.

Human limitations

It is impossible to remember all the details of past classes, personal preferences, discussion topics, and the most common mistakes of all students.

Student attrition

High turnover — students often leave for other teachers or platforms, or stop studying altogether due to a loss of motivation and the inability to track their own progress.

Don't know how to...

- Answer students questions
- Explain concepts
- Choose activities for the lesson
- Help students use new words/grammar

What are we doing

Role-play practice with AI-personas

- Practice compounds over time through a continuous narrative driven by memory and active recall
- Adapts future role-plays to target each user's specific weaknesses
- Persistent memory across personas
- Real-time error tracking and correction

AI-powered teacher

- Automatic preparation of an individual lesson structure for each class
- AI assistant during the lesson that helps improve student engagement
- Realtime assistance - answering questions, providing examples, and generating personalized activities

Seamless Integration

- Human and AI lessons on a single platform, with student progress and achievements tracked across both.

Chat with your progress

- Ask AI to instantly surface lesson summaries, conversation history, and personalized insights before every session or to create new personalized role-plays.
